Class:

BS Mathematics with
Data Science

Reg No:

FA25-BMD-031

Comsats University Islamabad
(Vehari Campus)

DATE: _____

Projects 1:

Wearables:

Wearables like smartwatches and fitness bands track health, fitness and give notifications. Apple Watch has most features but short battery, While Fitbit is cheaper with longer life. They are useful but raise privacy concerns.

Buying a New PC:

Buying a PC depends on needs. Dell is affordable, Lenovo offers a 2-in-1 design, while HP Pavilion has stronger performance with **16 GB RAM**. Best choice: HP Pavilion for long-term use.

The Internet:

The internet is a worldwide network for communication and information. A Google search give millions of results, but only reliable sources like dictionaries or educational sites should be trusted. It is powerful but requires careful use.

Gossip Sites:

Gossip sites allow anonymous posting of campus rumors and comments. While they promote free speech, they also spread harmful content.

Ethically, posting lies or harmful comments is wrong and can damage reputations. Responsibility should be shared by posters and monitored by schools.

Online Education:

Online education provides distance learning through the internet. It offers flexibility, full degrees and online resources but requires discipline and technology access. Courses differ in requirements, assignments and software. It is a growing alternative to traditional education.

Social Media and Jobs:

Employers now check social media before hiring. Inappropriate posts, offensive remarks or misleading content can affect job chances. While social media shows personality, it also risks misinterpretation. Job seekers should be careful about what they share online.

Project 2:

Wearable Displays:

Wearable displays like smart glasses show digital data to users. They connect with phones or the internet and are useful for work, gaming or training. However, they are costly and raise privacy issues.

Biometrics and Privacy:

Biometric systems such as fingerprint or face ID provide fast and secure access. They remove password problems but may risk privacy if data is stolen. Convenience must balance with safety.

Keyboarding Speed Test:

Typing tests help improve speed and accuracy. Regular practice rises words per minute, but accuracy is more important than speed. Online tools make progress easy to measure.

Green Technology Mandates:

E-paper saves trees and reduces waste but is expensive and slow to adopt. Government

support can help its use. It benefits society and the environment if applied wisely.

Assistive Computing :

Assistive technology like screen readers or special keyboards helps disabled people use computers. It improves learning, independence and equal opportunities. Such tools are vital for inclusion.

3D Printing Body Parts :

3D printing can create organs, skin or joints, offering hope for patients. Benefits include saving lives, but risks involve rejection and ethical issues. Careful medical rules are required.

Conclusion :

All these projects highlight how technology is shaping modern life. From education and health to jobs and privacy, technology offers great benefits but also challenges. To use it effectively, we must balance innovation with responsibility and ethics.
